

EFFECTIVE. PRICE FRIENDLY. GREEN.

Champion ION Scale Prevention System

The Champion ION is a non-magnetic, non-sacrificial unit, that controls scale without adding anything to the water.

It comes in varying size models and acts as a catalytic water conditioner that creates a soft calcium carbonate crystal. By doing so the ION extends the life of equipment components damaged by scale, allowing optimal performance.

Say goodbye to de-liming agents as those dollars are returned back into the food service operation!

The Dishwashing Machine Specialists

At locations where scale would ordinarily grow on surfaces, it now grows on the scale crystals grown within the ION. This process can also attract and eliminate scale that was present in the equipment before the ION was installed.

How ION Technology Works

Upon entering an ION, water experiences a pressure drop and turbulent flow. This causes dissolved carbon dioxide (CO₂) to become a gas in the water (much like bubbles in carbonated water).

The pressure drop changes the chemical characteristics of the water, producing a "saturated" condition with respect to calcium carbonate. This means the water in the ION is ready to precipitate or grow crystals of calcium carbonate (calcite). Calcium carbonate is commonly called "scale."

As the saturated water travels over the core in the ION housing, the core promotes the nucleation or growth of scale crystals. However, the force of the water passing through the ION continually keeps the core free of scale. The crystals are then carried out of the unit suspended in water.

The benefit comes as the ION treated water passes through applications such as cooling towers, ice and coffee machines, humidifiers, misting systems, evaporative coolers, or any system that uses water. At locations where scale would ordinarily grow on equipment surfaces, the scale now grows on the scale crystals grown within the ION (because the crystals that were generated within the ION function as alternative growth surfaces). This process can also attract and eliminate scale that was present in the equipment before the ION was installed.

In essence, ION takes existing total dissolved solids (TDS) and, through the processes of epitaxial nucleation and lattice matching, converts a portion of the TDS to suspended solids. That portion of the TDS that is converted to suspended solids protects the equipment from the growth of scale. The crystals stay suspended within the system and are discharged when the water exits the system.

The equipment stays clean and the scale goes down the drain. ION works with nature to prevent scale from growing on your equipment.

Water Flow Sizing

Note that the most important key to ION by Champion's documented reliable performance is in easily choosing the correct size, which is based simply and only on the **gallons per minute** (GPM or LPM) rate of water flow. The water flow may start and stop as required. However, when the water is flowing, it needs to be in the range of the model selected.

Sizing

Stainless Steel Housing			Specifications		
Model	Water Flow Range (GPM)	Water Flow Range (LPM)	Length (in")	Diameter (in")	Wt. (lbs)
116234	0.1 to 1.32	0.4 to 5.0	6.48	0.88	0.80
115683	0.4 to 2.76	1.5 to 10.4	7.00	1.25	2.00
115661	2.2 to 5.64	8.3 to 21.36	7.77	1.50	2.20
116235	4.3 to 9.0	16.0 to 33.6	8.97	1.75	3.40
115684	7.3 to 19.2	28.0 to 73.2	12.58	2.25	7.60
115685	15.0 to 42.0	57.0 to 158.4	25.375	3	26
115686	36.0 to 63.6	136 to 241.2	24.75	3.5	34

Sizing Assistance

For non-Champion other warewashing equipment, consult the factory.

For out-of-production warewashing or non-warewashing equipment, please contact the factory for proper sizing.
