Thermistor Capillary Installs Here

1. Install thermistor onto 1/2" x 1/8" reducing bushing (Bushing removed from booster).
2. Adjust probe end depth to 16" past the face of the thermistor ferrule fitting; tighten ferrule.
3. Use flashlight to view into booster through Tee fitting.
4. Slide thermistor lead into the center tube inside of the booster.
(The tube is a small amount above the entry piping centerline.)
**Temp swings will be very large if installed in wrong tube.
5. Install thermistor/reducing bushing onto booster.
6. Run machine to verify there are no unacceptably large temp swings.
- If large swings are occurring, decrease the ball valve opening to reduce steam input until swings are satisfactory.
