LIMITED WARRANTY

Champion Industries, Bi-Line Systems (herein referred to as ("The Companies")), 3765 Champion Blvd., Winston-Salem, North Carolina, 27105) warrants machines and parts, as set out below:

WARRANTY OF MACHINES: The Companies warrant all new machines of its manufacture bearing the name Champion or Bi-Line and installed within the United States to be free from defects in material and workmanship for a period of one (1) year from the date of installation or fifteen (15) months from the date of shipment by The Companies, whichever occurs first. This Limited Warranty does not cover products shipped outside of the United States. The warranty registration card must be returned to The Companies within ten (10) days after installation or registered online at www.championindustries.com/warranty-registration for the United States; or by fax using the form provided at the front of this manual. If the warranty card, fax, or email are not sent to The Companies within fifteen (15) days, then the warranty will expire after fifteen (15) months from the date of shipment. The Companies will not assume any responsibility for additional installation costs in any area with jurisdictional problems with local trades or unions. The Companies reserves the right to repair or replace a defective part or the entire machine, if a defect in workmanship or material is identified within the warranty period. Alternatively, The Companies may elect to accept the return of the machine for a full credit. In the event if The Companies elect to repair then the labor and work performed in connection with the warranty shall be done by The Companies' authorized service agent during regular working hours and at regular labor rates. Overtime charges are the responsibility of the equipment purchaser. Warranty travel is be covered up to fifty (50) miles from the authorized service technician's servicing office. If travel exceeds fifty (50) miles, the end user will be responsible for any additional travel expense. Service calls initiated under warranty and found not to contain any defects in materials or workmanship, will not be covered by The Companies warranty. Defective parts become the property of The Companies. Use of non-OEM replacement parts, not authorized by The Companies, will relieve The Companies of all further liability in connection with its warranty. In no event, will The Companies' warranty obligation exceed the charge for the machine. Machines that come with a factory-paid start-up will be limited to one (1) authorized service call for start-up. Installation problems or delays, of any kind, will not be covered by The Companies' warranty and will be the sole responsibility of the equipment purchaser.

THE WARRANTY DOES NOT COVER:

- a. Chemical tubing, chemical squeeze tubes, O-rings, or curtains.
- b. Vacuum breakers.
- c. Adjustments to structural or mechanical components covered by recommended maintenance procedures.
- d. Replacement of fuses, resetting of overload breakers, or high-limit thermostats.
- e. Adjustments of thermostats or other temperature controlling devices.
- f. Adjustments of clutches.
- g. Adjustments of water pressure(s).
- h. Adjustments of factory chemical pumps and settings.
- i. Opening or closing of utility supply valves or switching of electrical supply current.
- j. Cleaning of valves, strainers, screens, nozzles, or spray pipes.
- k. Regular maintenance and cleaning as outlined in the operator's guide.
- l. Damages resulting from water conditions, accidents, alterations, improper use, abuse, tampering, improper installation, under or over voltage conditions, power surges, inadequate wiring, outdoor use, or failure to follow maintenance and operation procedures.
- m. Pulper cutter blocks, pulse vanes, and auger brush due to wear and tear.
- n. Damages due to improper storage.
- o. Special installations or applications, including remote locations, are limited in coverage by this warranty.
- p. Any installation that requires additional work and/or travel to gain access to a machine for service is the sole responsibility of the equipment purchaser.

THE FOLLOWING DEFECTS ARE NOT COVERED BY THE WARRANTY:

1. Damage to the exterior or interior finish.
2. Damage caused by improper connection to utility service other than that designated on the rating plate.
3. Inadequate or excessive water pressure.
4. Corrosion due to foreign materials, improper water supplies, improper chemicals, or chemicals dispensed in excess of recommended concentrations.
5. Failure of components due to the connection of third-party chemical dispensing equipment installed by others.
6. Leaks and damage due to the use of non-specified water quality.
7. Leaks and damage caused by the installer, including machine table connections.
8. Leaks or damage caused by chemical dispensing equipment connections installed by others.
9. Failure to comply with all local building codes.
10. Damage caused by labor dispute.

WARRANTY OF PARTS: The Companies warrant all new machine parts produced or authorized by The Companies to be free from defects in material and workmanship for a period of ninety (90) days from the date of invoice. If any parts defect in material and workmanship is found to exist within the warranty period, then The Companies will refund the cost of the defective part.

DISCLAIMER OF WARRANTIES AND LIMITATIONS OF LIABILITY.

THE COMPANIES' WARRANTY IS ONLY TO THE EXTENT REFLECTED ABOVE. THE COMPANIES MAKE NO OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO ANY WARRANTY OF MERCHANTABILITY OR FITNESS OF PURPOSE. THE COMPANIES SHALL NOT BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES. THE REMEDIES SET OUT ABOVE ARE THE EXCLUSIVE REMEDIES FOR ANY DEFECTS FOUND TO EXIST IN MACHINES AND PARTS OF THE COMPANIES. ALL OTHER REMEDIES ARE EXCLUDED, INCLUDING ANY LIABILITY FOR INCIDENTALS OR CONSEQUENTIAL DAMAGES.

Champion Industries or Bi-Line Systems does not authorize any other person, including persons who deal in Champion Industries or Bi-Line Systems machines, to change this warranty or create any other obligation in connection with Champion Industries or Bi-Line Systems machines.

Model Description

IUH 351

High temperature hot water sanitizing dishwasher with built-in 40°F/22°C rise booster heater.
208-240VAC/50/60/1

Receiving

NOTE:

The installation of your dishwasher must be performed by qualified service personnel. Problems due to improper installation are not covered by the Warranty.

1. Inspect the outside of the dishwasher carton for signs of damage.
2. Remove the carton and inspect the dishwasher for damage.
3. Check for any accessories that may have shipped with your dishwasher.
4. Move the dishwasher near its permanent location.

CAUTION:

Be careful when lifting the to prevent damage.

NOTE:

The installation must comply with local health codes.

5. Check the utility connections are the same.
6. The dishwasher can be installed as a free-standing or under a built-in counter-top. The typical counter-top height 34" [86cm].
7. Place the dishwasher in its permanent location.
8. The dishwasher has 4 adjustable feet for leveling.
9. Level the dishwasher front-to-back and side-to-side.

Electrical Connections

WARNING:

Electrocution or serious injury may result when working on an energized circuit.

Disconnect power at the main breaker or service disconnect switch before working on the circuit.

Lock-out and tag the breaker to indicate that work is being performed on the circuit.

ATTENTION

A qualified electrician must connect the main incoming power to the dishwasher in accordance with all local codes and regulations .

VERIFY THE CORRECT VOLTAGE IS SUPPLIED TO THE MACHINE
THE CORRECT SUPPLY VOLTAGE IS/208-240VAC/50/60/1.

(See the diagram on next page.)

The Main Terminal Block (MTB) is located on the left-rear corner of the electrical panel.

Electrical Connections

1. Refer to the connection diagram on the preceding page and the photo below:
2. Machines require a 2-wire plus ground supply which includes a current carrying neutral.
3. Power connections are made at the Main Terminal Block (MTB).
4. The MTB is located on the left-rear corner of the electrical panel behind the front access panel.
(See the illustration on the previous page.)

NOTE:

Provide a 3 foot service loop in the power cable at the back of the dishwasher for service.

To Connect Main Power to the Dishwasher:

1. Remove the lower front access panel of the dishwasher.
2. Locate the electrical mounting panel on the right-side of the machine.
Remove the retaining nut at the top of the panel that holds the panel in place.
3. Lower the panel and pull it forward to gain access the MTB.
4. Feed the power cable through the cable hole located on the right side, as viewed from the front of the machine, into the interior of the machine.
5. Make sure the cable passes through the cable mounting bracket located near the front-center of the base and secure the cable with a cable connector.
6. Connect the ground wire to the base of the dishwasher with the ground screw provided next to the cable mounting bracket.
7. Feed the remaining cable wires to the Main Terminal Block and connect according to the connection diagram to the right.

Route the supply cable through the cable bracket.

SINGLE PHASE POWER CONNECTION 208-240VAC 50/60/1

HOW TO CONNECT POWER

1. Check the data plate on the front of the dishwasher for the voltage of the machine.
2. Remove the lower-front access panel.
3. Lower the electrical component bracket.
4. Feed the power cable from the rear of the dishwasher to the center of the machine and through the cable bracket.
5. Connect the ground wire to the base of the dishwasher using the ground screw located near the bracket.
6. Feed the power leads to the terminal block.
7. Connect L1, L2 and ground.
8. Main Power connections are complete.

Water Connections

NOTE

Plumbing connections must comply with local plumbing and sanitary codes.

IMPORTANT

Make sure that the flexible water supply and drain hoses are not kinked.

1. All models have a 6 ft. flexible hot water fill hose with a 3/4" NPS connector.
2. A 1/2" or larger main incoming supply line should be installed to the dishwasher.
3. A 1/2" or larger shut-off valve should be installed in the water supply line as close to the dishwasher as possible for service.
4. The pressure regulating valve, PRV, **must be installed** after the shut-off service valve if the incoming flow pressure exceeds 20-22 psi.
5. The hot water supply must provide a minimum of 140°F/60°C, measured at the dishwasher for the 40°F/ 22°C rise booster.
6. A water hardness of 3 grains/U.S. gal[51.3 mg/L] or less is recommended.

Drain Connections

1. The dishwasher has a 6 ft. flexible hot water fill hose with a 3/4" NPS connector.
2. The machine is a gravity drain.
3. The maximum drain flow is 8 U.S. gpm /30 LPM.
4. Make sure the drain hose does not kink. Kinks will prevent the dishwasher from draining completely causing water to flow out the front door.

***This Page
Intentionally
Left Blank***

Check List

1. Remove any protective film from dishwasher. Check the interior for foreign material.
2. Make sure that the dishwasher is permanently located.
3. Make sure that all utility connections are complete.
4. Make sure that the flexible drain hose and the hot water fill hose are not kinked.
5. Make sure that the sump filter is in place.
6. Make sure that the overflow tube is installed and firmly seated in the sump.
7. Make sure that the spray arms are in place and that they spin freely.
8. Fully close the dishwasher door.
9. Turn hot water supply on and check for leaks in the main water supply piping connected to the dishwasher.

IMPORTANT

During the initial fill, adjust the PRV to ensure that the flowing pressure of the incoming water is set to 20-22 PSI.

*Install the scrap screen, overflow tube, and spray arms.
Make sure the spray arms turn freely.*

Normal Wash Mode

Follow the instructions below to operate the dishwasher in a Normal Wash Mode. A Rinse Sentry feature holds the dishwasher in a wash mode if the booster heater temperature is below 180°F/82°C.

1. Turn the main power on at the main circuit breaker.
2. Install the sump filter, overflow tube and spray arms.
3. Make sure the flexible drain hose and the flexible fill hose are not kinked, then turn the water supply on.
4. Close the dishwasher front door.
5. Push the dishwasher Power Switch to the ON position. The power switch will illuminate and the machine will fill with water.
6. Wait 15-minutes for dishwasher to reach a minimum of 150°F/66°C.
7. At the beginning of the day, run 2 empty cycles before checking the final rinse operating temperature. The first cycle will take longer to reach the proper temperature.

! ATTENTION !

If the wash temperature is low for an extended period of time, drain the machine and refill with fresh water. Run two empty cycles and then check that the wash tank gauge indicates 150°F/ 66°C.

8. Load soiled wares into the dish rack. Place plates, glasses, cups and bowls in a peg rack. Place utensils in a single layer in a flat-bottom rack. Place pots and pans in a flat-bottom rack. Do not overload the dish racks.
9. Slide 1 dish rack into the wash compartment making sure that wares do not interfere with the rotating spray arms. Do not wash more than 1 dish rack at a time.
10. Close the front door fully, then press and hold the START BUTTON for 1-second. The green in-cycle light will illuminate and the wash cycle will begin. The wash cycle time runs for approximately 1-1/2 minutes. (*continued on next page*)

Normal Wash Mode *(continued)*

11. Opening the door when the dishwasher is in-cycle will stop the dishwasher. The cycle will resume automatically when the dishwasher door is closed fully.
12. The final rinse cycle begins at the end of the wash cycle and runs for approximately 15-seconds
13. At the end of the rinse cycle, the in-cycle light will go out. Open the door and remove the clean rack of wares. Repeat steps 8-12 for additional dish racks.
14. Refer to the Cleaning Instructions, *"After Each Meal Period or every 8 Hours of Operation"*, on page 9 for the procedures to drain and clean the dishwasher.

Rinse Sentry Mode

The final rinse water temperature must be a minimum of 180°F/82°C during the final rinse cycle to ensure that all wares are sanitized. If for any reason, the hot water temperature in the booster tank cannot provide this temperature, the dishwasher will enter a Rinse Sentry Mode of operation and extend the cycle time.

The Rinse Sentry changes the Normal Operation Mode as described below:

1. The Rinse Sentry constantly monitors the water temperature inside final rinse booster.
2. If the temperature inside the booster heater falls below 180°F/82°C then the Rinse Sentry will extend the wash cycle time until the booster heater water temperature reaches the proper temperature.
3. The in-cycle light will remain illuminated during the Rinse Sentry Mode.
4. An extraordinarily long wash cycle may indicate a low incoming water temperature or a problem with the booster heater operation.

**DO NOT REMOVE WARES UNTIL THE FINAL RINSE CYCLE HAS
SANITIZED THE WARES AND THE GREEN CYCLE LIGHT GOES OUT.**

Cleaning

After Each Meal Period or every 8 Hours of Operation.

1. Press the lighted power switch to the OFF position. The power switch light will go out.
2. Open the door and remove the overflow tube.
3. Inspect and clean the overflow tube rubber seal
4. Remove the sump filter carefully to keep the soil or waste particles from falling into the sump.
5. Clean the sump filter by rinsing with clean water.
Be sure to back-flush the filter.
Do not strike the filter against solid objects.
6. Check the sump for foreign material and clean as required.
7. Replace sump filter and the overflow tube.
8. Make sure that spray arms turn freely.
9. Close the door and turn the ON/OFF switch to ON and return to normal operation mode.

Cleaning

At the End of the Day

1. Remove the upper and lower rinse and wash spray arms. The spray arms are interchangeable.
2. Unscrew the rinse arm pin (A). Remove the rinse arm assemblies
3. Clean the final rinse arm nozzles using a small paper clip (B).
4. Remove the rinse arm end plugs (C) *if necessary*, and flush the rinse arm with clean water.
5. Re-install the rinse arm end plugs if they were removed.
6. Remove the wash spray arms and flush with clean water.
7. DO NOT USE STEEL WOOL TO CLEAN THE INTERIOR OF THE MACHINE.
8. Contact the chemical supplier for de-liming if required (see next page).
9. Wipe the interior and exterior of the machine with a soft cloth and a mild detergent.
DO NOT HOSE THE EXTERIOR OF THE MACHINE WITH WATER.
10. Reassemble the dishwasher and leave the door open to allow overnight drying.

De-liming

Minerals accumulate on the interior surfaces of the dishwasher. The deposits have a white haze and, in cases of heavy accumulation, may appear as a granular solid. The generic name for mineral deposits is lime. The removal of lime deposits is called de-liming. Your dishwasher should be de-limed regularly; how often will depend on the mineral content of your water.

Inspect your machine interior for lime deposits. If deliming is required, a de-liming agent should be used for best results in accordance with the chemical supplier's instructions.

DANGER:

Death or serious injury may result when de-liming solution is mixed with sodium hypochlorite (*chlorine bleach*) sanitizing agent. Mixing may cause hazardous gases to form.

De-liming solution and other acids must never be mixed with chlorine, iodine, bromine, or fluorine.

CAUTION:

Skin contact with de-liming solutions can cause severe irritation and possible chemical burns. Always wear protective clothing and goggles when handling chemicals.

ATTENTION:

Contact your chemical supplier for specific safety procedures and instructions for the use of the de-liming solution supplied for the dishwasher.

De-liming solution or other chemicals are not supplied by the dishwasher manufacturer.

Maintenance

Follow the maintenance schedules below to keep the dishwasher operating most efficiently.

Daily Maintenance

1. Check all of the wash arm and rinse arm spray jets and clean as necessary.
2. Make sure that the water supply is on and that the drain is not clogged.
3. Make sure that dish racks are in good condition.
4. Follow the cleaning procedures given above.

Weekly Maintenance

1. Perform Steps 1-4 in the Daily Maintenance.
2. Inspect water lines for leaks.
3. Check for water leaks underneath the dishwasher.
4. Make sure the flexible water fill and drain hoses are not kinked.
5. Make sure that the dishwasher is level.
6. Clean accumulated lime deposits from the wash tank heating element.
7. Inspect the scrap screen and replace it if damaged.
8. Check the spray arms and replace or repair if damaged.

Troubleshooting

Follow the troubleshooting guide below in the event that your dishwasher does not operate as expected. Perform the basic checks below before calling an authorized service agent:

1. Make sure that the main water supply is turned on.
2. Make sure that the main power is turned on.
3. Make sure that the flexible water fill and drain hoses are not kinked.

Condition	Cause	Solution
Dishwasher will not run.	Door not closed. Main power OFF. Dishwasher OFF.	Close door completely. Check breaker on panel. Turn dishwasher ON.
Low or no water.	Main water supply off. PRV setting incorrect Solenoid strainer clogged. Solenoid valve defective.	Open supply valve. Adjust the PRV setting Clean strainer. Contact Service Agent.
Chemicals won't feed into dishwasher.	Chemical supply low. Pick-up tube clogged Supply tubing damaged. Supply tubing kinked.	Refill chemical container. Clean/replace tube. Replace tubing. Straighten tubing.
Poor wash results.	Wares incorrectly loaded. in dishrack. Clogged sump filter. Clogged spray arms. Detergent injector not feeding. Thermostat defective. Detergent motor defective. Water temperature low.	Reposition wares or reduce amount of wares. Clean sump filter. Clean spray arms. Replace squeeze tube or clean tubing and pick-up tube. Contact Service Agent. Contact Service Agent Drain and refill wash tank and run 2 empty cycles. Contact service agent if problem persists.
Dishwasher stays in wash cycle.	Safe-T-Temp extends wash mode to allow final rinse water booster temperature to reach 180°F/82°C. Dishwasher is operating in the Extended Wash Mode.	Contact Service Agent because booster thermostat is defective. Press the Extended Wash button 1 time. The Extended Wash Indicator light will go out, the wash cycle will resume where it left off and perform a final rinse cycle.

LIMITED WARRANTY

Champion Industries, Bi-Line Systems (herein referred to as ("The Companies")), 3765 Champion Blvd., Winston-Salem, North Carolina, 27105) warrants machines and parts, as set out below:

WARRANTY OF MACHINES: The Companies warrant all new machines of its manufacture bearing the name Champion or Bi-Line and installed within the United States to be free from defects in material and workmanship for a period of one (1) year from the date of installation or fifteen (15) months from the date of shipment by The Companies, whichever occurs first. This Limited Warranty does not cover products shipped outside of the United States. The warranty registration card must be returned to The Companies within ten (10) days after installation or registered online at www.championindustries.com/warranty-registration for the United States; or by fax using the form provided at the front of this manual. If the warranty card, fax, or email are not sent to The Companies within fifteen (15) days, then the warranty will expire after fifteen (15) months from the date of shipment. The Companies will not assume any responsibility for additional installation costs in any area with jurisdictional problems with local trades or unions. The Companies reserves the right to repair or replace a defective part or the entire machine, if a defect in workmanship or material is identified within the warranty period. Alternatively, The Companies may elect to accept the return of the machine for a full credit. In the event If The Companies elect to repair then the labor and work performed in connection with the warranty shall be done by The Companies' authorized service agent during regular working hours and at regular labor rates. Overtime charges are the responsibility of the equipment purchaser. Warranty travel is be covered up to fifty (50) miles from the authorized service technician's servicing office. If travel exceeds fifty (50) miles, the end user will be responsible for any additional travel expense. Service calls initiated under warranty and found not to contain any defects in materials or workmanship, will not be covered by The Companies warranty. Defective parts become the property of The Companies. Use of non-OEM replacement parts, not authorized by The Companies, will relieve The Companies of all further liability in connection with its warranty. In no event, will The Companies' warranty obligation exceed the charge for the machine. Machines that come with a factory-paid start-up will be limited to one (1) authorized service call for start-up. Installation problems or delays, of any kind, will not be covered by The Companies' warranty and will be the sole responsibility of the equipment purchaser.

THE WARRANTY DOES NOT COVER:

- a. Chemical tubing, chemical squeeze tubes, O-rings, or curtains.
- b. Vacuum breakers.
- c. Adjustments to structural or mechanical components covered by recommended maintenance procedures.
- d. Replacement of fuses, resetting of overload breakers, or high-limit thermostats.
- e. Adjustments of thermostats or other temperature controlling devices.
- f. Adjustments of clutches.
- g. Adjustments of water pressure(s).
- h. Adjustments of factory chemical pumps and settings.
- i. Opening or closing of utility supply valves or switching of electrical supply current.
- j. Cleaning of valves, strainers, screens, nozzles, or spray pipes.
- k. Regular maintenance and cleaning as outlined in the operator's guide.
- l. Damages resulting from water conditions, accidents, alterations, improper use, abuse, tampering, improper installation, under or over voltage conditions, power surges, inadequate wiring, outdoor use, or failure to follow maintenance and operation procedures.
- m. Pulper cutter blocks, pulse vanes, and auger brush due to wear and tear.
- n. Damages due to improper storage.
- o. Special installations or applications, including remote locations, are limited in coverage by this warranty.
- p. Any installation that requires additional work and/or travel to gain access to a machine for service is the sole responsibility of the equipment purchaser.

THE FOLLOWING DEFECTS ARE NOT COVERED BY THE WARRANTY:

1. Damage to the exterior or interior finish.
2. Damage caused by improper connection to utility service other than that designated on the rating plate.
3. Inadequate or excessive water pressure.
4. Corrosion due to foreign materials, improper water supplies, improper chemicals, or chemicals dispensed in excess of recommended concentrations.
5. Failure of components due to the connection of third-party chemical dispensing equipment installed by others.
6. Leaks and damage due to the use of non-specified water quality.
7. Leaks and damage caused by the installer, including machine table connections.
8. Leaks or damage caused by chemical dispensing equipment connections installed by others.
9. Failure to comply with all local building codes.
10. Damage caused by labor dispute.

WARRANTY OF PARTS: The Companies warrant all new machine parts produced or authorized by The Companies to be free from defects in material and workmanship for a period of ninety (90) days from the date of invoice. If any parts defect in material and workmanship is found to exist within the warranty period, then The Companies will refund the cost of the defective part.

DISCLAIMER OF WARRANTIES AND LIMITATIONS OF LIABILITY.

THE COMPANIES' WARRANTY IS ONLY TO THE EXTENT REFLECTED ABOVE. THE COMPANIES MAKE NO OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO ANY WARRANTY OF MERCHANTABILITY OR FITNESS OF PURPOSE. THE COMPANIES SHALL NOT BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES. THE REMEDIES SET OUT ABOVE ARE THE EXCLUSIVE REMEDIES FOR ANY DEFECTS FOUND TO EXIST IN MACHINES AND PARTS OF THE COMPANIES. ALL OTHER REMEDIES ARE EXCLUDED, INCLUDING ANY LIABILITY FOR INCIDENTALS OR CONSEQUENTIAL DAMAGES.

Champion Industries or Bi-Line Systems does not authorize any other person, including persons who deal in Champion Industries or Bi-Line Systems machines, to change this warranty or create any other obligation in connection with Champion Industries or Bi-Line Systems machines.

Descripción de Modelo

351HT E

El lavaplatos esterilizador de alta temperatura con agua caliente, está construido con temperatura de calefacción de refuerzo integrado 40°F/22°C aumento.
208-240VAC/50/60/1.

ATENCIÓN:

La instalación de su lavaplatos debe realizarse por una persona de servicio calificado.

Problemas debido a la instalación incorrecta de su equipo no serán cubiertos por la garantía.

1. Inspeccionar el exterior de la caja de cartón de su lavaplatos por si tiene muestras de daño.
2. Quitar la caja de cartón e inspeccionar el lavaplatos por daños.
3. Buscar todos los accesorios que pueden haber sido enviadas con su lavaplatos.
4. Mueva el lavaplatos cerca de la ubicación permanente.

PRECAUCIÓN:

Tenga cuidado al levantarla para evitar daños.

ATENCIÓN:

La instalación debe cumplir con códigos de salud local.

5. Compruebe que las conexiones de utilidad sean los mismos.
6. El lavaplatos puede instalarse como un lavaplatos independiente o en virtud de uno bajo barra.
La altura típica de uno bajo barra es 34" [86cm].
7. Coloque el lavaplatos en su ubicación permanente.
8. El lavaplatos tiene 4 pies ajustables de nivelación.
9. Nivelar el lavaplatos al frente y atrás, y lado a lado.

Conexiones Eléctricas

ADVERTENCIA:

Electrocución o lesiones serias pueden resultar cuando se trabaja con un circuito de energía. Desconecte la energía en el interruptor principal o de servicio de interruptores y desconéctelo antes de trabajar en el circuito. Mirar y marcar el interruptor para indicar que esta trabajando con ese circuito.

ATENCIÓN

Un electricista calificado debe ser quien conecte la entrada de energía del lavaplatos de acuerdo con las regulaciones de conformidad con todos los códigos reglamentarios locales.

**VERIFICAR EL VOLTAJE CORRECTO QUE SE ESTA SUMINISTRANDO A LA MAQUINA
EL SUMINISTRO DE VOLTAGE CORRECTO ES 208 - 240 VCA/50/60/1.**

(Vea el diagrama en la página siguiente.)

El bloque principal, terminal eléctrico (MTB) se encuentra en la esquina trasera izquierda del panel eléctrico.

Conexiones Eléctricas

1. Consulte el diagrama de conexión en la página anterior y en la foto debajo:
2. Máquinas requieren 2 abastecimientos, uno de tierra y uno que incluye un cable de transporte de corriente neutral.
3. Las conexiones de energía se realizan en el bloque principal del terminal (MTB).
4. El MTB se encuentra en la esquina trasera izquierda del panel eléctrico detrás del panel frontal de acceso. (Consulte la ilustración en la página anterior).

ATENCIÓN:

Proporcionar 3 pies de cable de energía eléctrica enrollado en la parte trasera del lavaplatos para el servicio.

Conexión de suministro principal al lavaplatos.

1. Quitar el panel delantero de acceso al lavaplatos.
2. Busque el panel de montaje eléctrico en el lado derecho de la máquina. Quite la tuerca de retención en la parte superior del panel que mantiene el panel en su lugar.
3. Disminuir el panel y tire hacia adelante para acceder al bloque principal del terminal (MTB).
4. Colocar el cable de energía eléctrica a través del agujero de cable, localizado en el lado derecho, tal como se puede ver en la parte frontal de la maquina, en el interior del lavaplatos.
5. Asegúrese de que el cable pase a través del soporte situado en el montaje cerca de la parte frontal-centro de la base y asegurar el cable con un conector de cable.
6. Conecte el cable de tierra a la base del lavaplatos, con el tornillo de tierra junto al cable de soporte de montaje.
7. Los cables de energía eléctrica que sobren, deben ser colocados con el terminal principal y conectar según el diagrama de conexión a la derecha.

Dirija el cable de suministro a través del soporte de cable.

Fase Sencilla de Conexión Eléctrica 208-240VAC 50/60/1

Como Conectar la Electricidad

1. Compruebe la placa de datos en la parte delantera del lavaplatos para los voltios de la máquina.
2. Quitar la parte inferior del panel de acceso frontal.
3. Disminuir el soporte de componentes eléctricos.
4. Suministrar el cable eléctrico de la parte posterior del lavaplatos en el centro de la máquina y a través del soporte del cable
5. Conecte el cable de tierra a la base de la lavadora de platos utilizando el tornillo de tierra situado cerca del soporte.
6. Suministrar la luz que conduce al bloque de terminal.
7. Conecte L1, L2 en el piso.
8. Conexiones de suministro principal están completas.

Conexión de Agua

ATENCIÓN

Conexiones de plomería deben cumplir con plomería local y códigos sanitarios.

IMPORTANTE

Asegúrese de que el suministro de agua y tubos flexibles de drenaje no estén torcidos.

1. Todos los modelos cuentan con una manguera de agua caliente de 6 pies, y con un conector de NPS 3/4".
2. Un 1/2" o una mas grande línea principal de suministro entrante debe ser instalado en el lavaplatos.
3. Un 1/2" o una más grande válvula de cierre debe ser instalado en la línea de suministro de agua lo mas cerca posible para poder darle un buen servicio al lavaplatos.
4. La válvula reguladora de presión, PRV, **debe instalarse** después que la válvula de cierre de servicio este apagada, Si la entrante es bajo la presión que no sea superior a 20-22 psi.
5. El suministro de agua caliente debe proporcionar un mínimo de 140°F/60°C, Medir en el lavaplatos para el calentador de agua de 40°F / de 22°C.
6. Dureza de agua de 3 granos/U.S. gal [51.3mg/L] o menos es recomendado.

Conexión de Desagüe

1. El lavaplatos tiene una manga de desagüe de gravedad.
2. El flujo máximo de desagüe es 8 (E.U.) galones por minuto/30 litros por minuto.
3. Asegúrese de que la manga de desagüe no tiene retorcedura. Las retorceduras prevendrán el agua de desaguar completamente, y el lavaplatos se derramará fuera la puerta principal.

***Esta Página
Intencionalmente se ha
Dejado en Blanco***

Lista de Verificación

1. Quitar cualquier protector del lavaplatos. Revise el interior por cualquier material extraño.
2. Asegúrese el lavaplatos esté permanentemente en su sitio.
3. Asegúrese todas las conexiones de servicios públicos están completos.
4. Asegúrese el conducto de drenaje extendido y la manguera de agua caliente no estén enredadas.
5. Asegúrese el filtro de el sifón este en su lugar.
6. Asegúrese el tubo de desagüe está instalado y bien puesto firmemente en el sifón.
7. Asegúrese los brazos rociadores están en su lugar y que giren libremente.
8. Totalmente cerrar la puerta del lavaplatos.
9. Gire el suministro de agua caliente y comprobar si hay fugas en el suministro de agua principal conectados a la tubería del lavaplatos.

IMPORTANTE

Durante el relleno inicial, ajuste la PRV para garantizar que la presión que fluye el agua entrante este establecida en 20-22 psi.

*Instale el filtro del sifón, tubo de desbordamiento, y los brazos de rociado.
Asegúrese de que los brazos de rociado giren libremente.*

Modo de Lavar Normal

Siga las siguientes instrucciones para hacer funcionar el lavaplatos en un modo normal. Una característica de enjuague Centinela mantiene el lavaplatos lavando si el calentador de agua esta por debajo de 180°F/82°C.

1. Gire el interruptor principal que esta en el circuito principal.
2. Instalar el filtro del sifón, sobre el tubo de desagüe y los brazos rociadores.
3. Asegúrese de que la manguera de drenaje flexible y la manguera extensible del agua no estén torcidas o enredadas, y encienda el abastecimiento de agua.
4. Cierre la puerta de entrada del lavaplatos.
5. Presione el interruptor de encendido de lavaplatos a la posición ON. El interruptor de encendido se iluminará, la máquina empezará a llenarse con agua.
6. Espere 15 minutos para que el lavaplatos llegue a un mínimo de 150°F/66°C.
7. Colocar platos sucios en el estante para platos. Coloque platos, vasos, tazas, y platos hondos en una canasta de soporte. Coloque utensilios en una sola capa y acostados al fondo de una canasta. Coloque ollas y sartenes en una canasta plana en el fondo de la misma. No sobrecargue las canastas de platos.
8. Deslice 1 estante para platos en el compartimiento de lavado, asegurándose de que los platos no toquen o interfieran con los brazos de rociado en rotación. No lavar mas de una canasta a la vez.
9. Cerrar la puerta delantera plenamente, a continuación, presione y sostenga el interruptor de encendido (Start) por un segundo. Se encenderá la luz en el ciclo de color verde y se iniciará el ciclo de lavado. El ciclo de lavado tendrá un tiempo de duración aproximadamente 1-1/2 minutos.
10. Al abrir la puerta cuando el lavaplatos esta encendido la maquina automáticamente se apagará. El ciclo se reanudará automáticamente cuando la puerta del lavaplatos se cierra completamente.
11. El ciclo de enjuague comienza al final del ciclo de lavado y tiene una duración aproximadamente 15 segundos.
12. Al final del ciclo de enjuague, la luz del ciclo se apagará, Abra la puerta y sacar la bandeja de los platos limpios. Repita los pasos del 8-12 para canastas de platos adicionales.
13. Consulte las instrucciones de limpieza, "Después de cada periodo de comida o cada 8 horas de funcionamiento", en la página 9 para los procedimientos drenaje y limpieza del lavaplatos.

Modo de Enjuague Centinela

La temperatura del agua de enjuague final debe ser de un mínimo de 180°F/82°C durante el ciclo de enjuague final para garantizar que todos los productos sean desinfectados. Si por cualquier motivo, la temperatura del agua caliente en el tanque de calentador de agua no puede proporcionar esta temperatura, el lavaplatos entra en el ciclo en modo de centinela y se extiende el tiempo de operación.

El enjuague centinela cambia el modo de operación normal, tal como se describe a continuación:

1. El centinela enjuague supervisa constantemente la temperatura del agua dentro del calentador de agua en el enjuague final.
2. Si la temperatura dentro del calentador de agua cae por debajo de los 180°F/82°C entonces el enjuague centinela ampliará el ciclo de lavado de tiempo hasta que la temperatura del agua del calentador alcance la temperatura adecuada.
3. La luz permanecerá encendida durante el modo de enjuague de centinela.
4. Un ciclo de lavado extraordinariamente largo puede indicar una baja temperatura del agua entrante o un problema con el funcionamiento del calentador de agua.

NO quite los platos hasta que el ciclo de enjuague final haya desinfectado y la luz verde del ciclo final se haya apagado.

! ATENCIÓN !

Si la temperatura de lavado esta baja por un tiempo extendido, drene la maquina y rellene con agua fresca. Inicié dos ciclos de lavado (sin platos o vasos en la maquina) y chequear que el termómetro del tanque de lavado indique 150°F/66°C.

Limpieza

Después de cada periodo de comida o cada 8 horas de funcionamiento

1. Presione el interruptor de encendido en la posición OFF. El interruptor de luz de encendido se apagará.
2. Abra la puerta y retire el tubo de desagüe.
3. Quite el filtro del sifón con cuidado para mantener las partículas o residuos de comida, para que no caigan dentro del sifón.
4. Limpie el filtro del sifón y enjágüelo con agua limpia.
Asegúrese de lavar el filtro por ambos lados.
No golpear el filtro contra objetos sólidos.
5. Revise el sifón por si quedo algún material extraño o comida y límpielo según sea necesario.
6. Reemplazar el filtro del sifón y el tubo de desagüe.
7. Asegúrese de que los brazos de rociado giren libremente.
8. Cerrar la puerta y prender el interruptor de encendido ON/OFF (PRENDER/APAGAR) a ON y volver al modo de funcionamiento normal.

Limpieza

Al final del día

1. Retire los brazos rociadores inferior y superior de enjuague y de lavado, Los brazos de rociado son intercambiables.
2. Afloje el pin del brazo de enjuague (A). Quitar los brazos de enjuague ensamblables.
3. Limpiar las boquillas de brazo de enjuague final con un pequeño clip de papel (B).
4. Quite los tapones de los brazo de enjuague final (C) si es necesario, y lavar el brazo de enjuague con agua limpia.
5. Vuelva a instalar los tapones de enjuague final del brazo si se quitan.
6. Quitar los brazos rociadores de lavado y lavarlos con agua limpia.
7. NO UTILICE ESPONJA DE ACERO PARA LIMPIAR EL INTERIOR DE LA MÁQUINA.
8. Póngase en contacto con el proveedor de productos químico para de-calcificar si es necesario (consulte la página siguiente).
9. Limpiar dentro y fuera de la máquina con un paño suave y un detergente suave.
NO LAVE POR FUERA DE LA MÁQUINA CON UNA MANGUERA Y AGUA.
10. Volver a ensamblar el lavaplatos y dejar la puerta abierta para permitir que se seque durante la noche.

Para Descalcificar

Minerales se acumulan en las superficies interiores del lavaplatos. Los depósitos tienen una niebla blanca y, en los casos de acumulación pesada, pueden aparecer como gránulos sólidos.

El nombre genérico para depósitos minerales es CAL. La eliminación de los depósitos de CAL se denomina de - calcificar. Su lavaplatos debe ser de – calcificar regularmente; y con qué frecuencia dependerá de el contenido de su agua mineral.

Inspeccionar el interior de máquina para depósitos de cal. Si se requiere de - calcificar, un químico para de – calcificar debe utilizarse para obtener mejores resultados de conformidad con las instrucciones del proveedor de productos químicos.

Peligro:

Pueden ocasionar la muerte o lesiones graves cuando de - calcificar solución se mezcla con hipoclorito de sodio (blanqueador de cloro) un químico de limpieza. Mezclarlos puede causar gases peligrosos. La solución de decalcificando y otros ácidos nunca deben ser mezclada con yodo, cloro, bromo o flúor.

Precaución:

Contacto con la piel de las soluciones de cal puede causar irritación severa y posibles quemaduras químicas. Siempre use ropa protectora y gafas al manipular los productos químicos.

Atención:

Comuníquese con su proveedor de sustancias químicas para los procedimientos específicos de seguridad y las instrucciones para el uso de la solución de-calcificar, suministrados para el lavaplatos. La solución para Decalcificar, o otros químicos no se pueden conseguir con la fabrica de lavaplatos.

Mantenimiento

Follow the maintenance schedules below to keep the dishwasher operating most efficiently.

Siga los planos de mantenimiento mencionados abajo para mantener el lavaplatos en un funcionamiento más eficiente.

Mantenimiento diario

1. Mirar todos los Brazos de lavado y enjuague y los inyectores de roseo, limpiarlos si es necesario.
2. Asegúrese de que el suministro de agua estén encendidos y que el desagüe no esté obstruido.
3. Asegúrese de que las canastas de platos estén en buenas condiciones.
4. Siga los procedimientos de limpieza dados anteriormente.

Mantenimiento Semanal

1. Realicé los pasos 1-4 en el mantenimiento diario.
2. Inspeccionar las mangueras de agua por si hay una fuga.
3. Asegurase que no haya fugas de agua por debajo del lavaplatos.
4. Asegúrese de que la manguera de agua y de desagüe extensible no estén torcidas.
5. Asegúrese de que el lavaplatos esta en nivel.
6. Limpiar los depósitos de cal acumulados en la resistencia del tanque de lavado.
7. Inspeccione los filtros de desperdicios y reemplazarlos si están dañados.
8. Mirar los brazos de rociado y reemplazar o reparar si están dañados.

Localización y Solución de Problemas

Siga la guía de solución de problemas más adelante en caso de que su lavaplatos no funcione como se espera. Chequear los controles básicos a continuación antes de llamar a un agente de servicio técnico autorizado.

1. Asegúrese el suministro principal de agua está activado
2. Asegúrese el interruptor principal está encendido.
3. Asegúrese la manguera de agua y de desagüe extensible no estén torcidas

CONDICIÓN	CAUSA	SOLUCIÓN
El lavaplatos no se pone en marcha	La puerta no cierra. Interruptor principal encendido apagado. Lavaplatos apagado. .	Cerrar la puerta. Verifica que el interruptor de luz principal este encendido. Prender el lavaplatos.
No hay agua o hay poco agua	Suministro principal de agua está apagado. PRV configuración incorrecta. Solenoides filtro obstruido. Solenoides de la válvula defectuosa..	Abra la válvula de suministro. Ajustar la configuración PRV. Limpiar el filtro. Póngase en contacto con el agente de servicio.
Resultados muy bajos de lavado.	El tanque no tiene detergente. Platos incorrectamente puestos en la conasta de platos. Filtro del sifón obstruido. Brazos de rociado obstruidos. Termostato defectuoso. Motor de detergente defectuoso. La temperatura del agua de lavado es demasiado baja.	Añadir detergente. Organizar los platos o reducir la cantidad de platos. Limpiar el filtro de sifón. Limpiar los brazos de rociado. Póngase en contacto con el agente de servicio. Póngase en contacto con el agente de servicio. Póngase en contacto con el agente de servicio.
Lavaplatos debe estar en el ciclo de lavado.	Enjuague centinela ampliará el tiempo hasta que la temperatura del agua del calentador alcance la temperatura adecuada 180°F/82°C.	Póngase en contacto con el agente de servicio. porque el motor del termostato esta defectuoso.
